

DrishtiSport AI

Turning Every Rural Playground Into a Biomechanics Lab

Samsung Solve for Tomorrow 2026 | Theme 3: Sport & Tech

Project Name: DrishtiSport AI
Team Name : Samsung4all
Solo Builder: Guru Sai Sumith
Theme 3: Sport & Tech

Introduction / Team

Guru Sai Sumith
Solo Founder & Builder
Gayatri Vidya Parishad College of Engineering

Vision: "One builder, one mission - put elite biomechanics in every rural coach's pocket for Bharat's 98% underserved athletes "

Backed by structured mentorship: FITT-IIT Delhi design-thinking sessions [Abhishek Maurya, Arpan Kansal, Vaibhav Singh Parihar, Vanita Vasudeva, Dhruvi Sharma]

Full Stack AI-ML Engineer

Computer Vision & ONNX model Pose estimation, model quantization, on-device inference pipelines.

Flutter / Mobile App Development

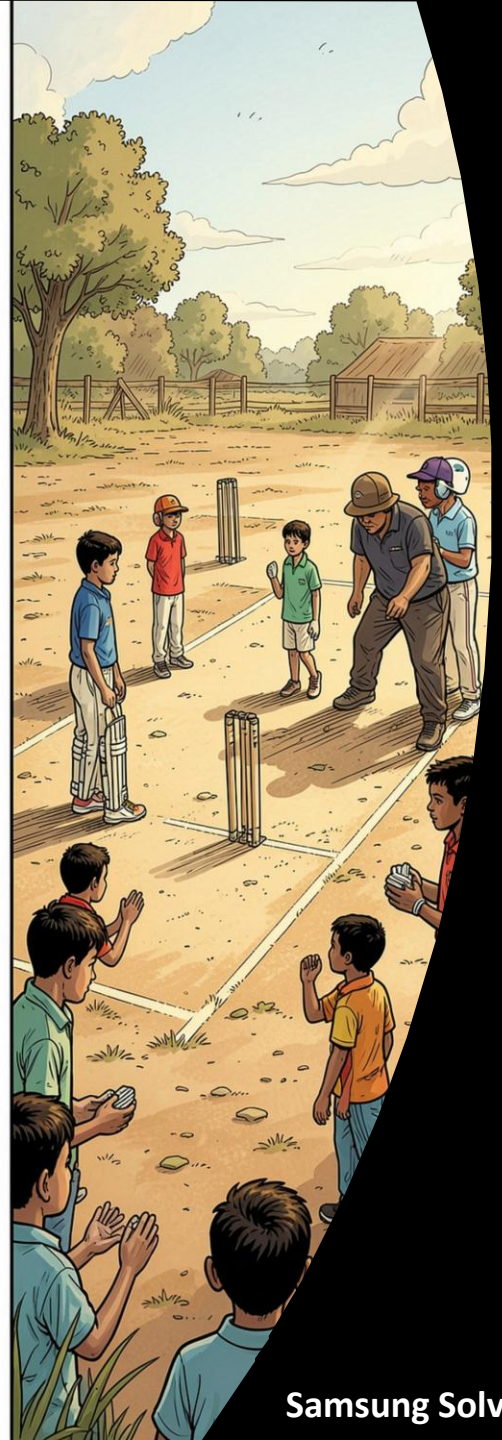

Cross-platform app, offline-first UX, local audio alerts and logging.

Grassroots Sport Practice

Hands-on coaching experience and contextualised thresholds for rural use.

DrishtiSport AI

Problem

A Biomechanics Gap No One Is Pricing For

Access Gap

98% of rural Indian athlete's train with zero biomechanical analysis -

Cost Barrier

Elite motion-capture labs cost ₹5,000+/hour - restricted to national

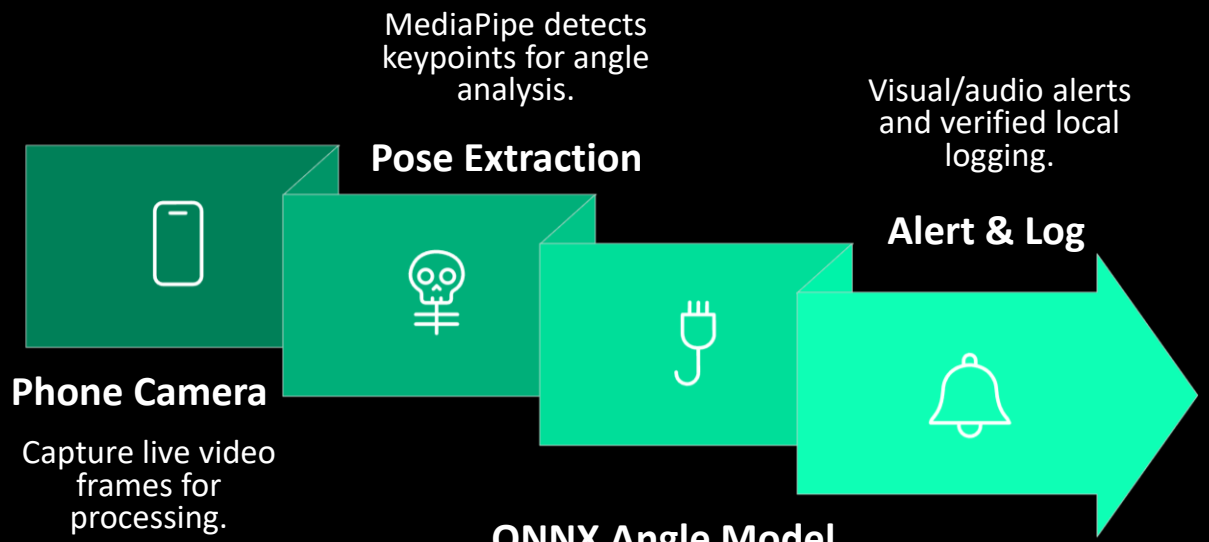

Detection Barrier

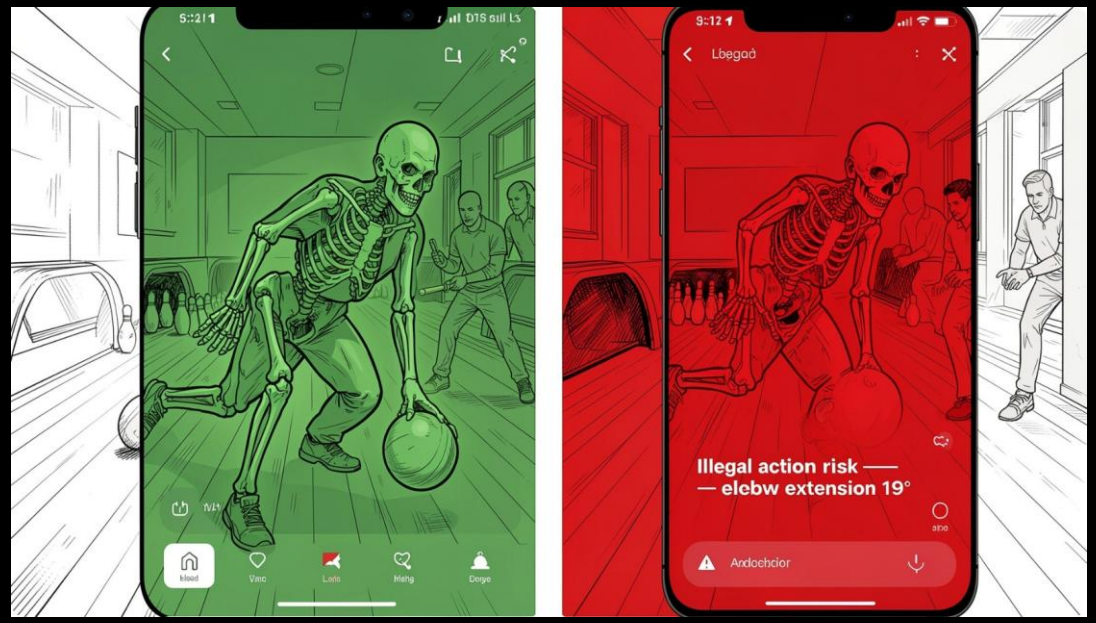

ICC Law 24.3 sets a 15° elbow-extension limit for bowling legality - rural umpires/coaches lack objective tools; bowlers can be called out unfairly or injured.

DrishtiSport AI

Solution

DrishtiSport AI: Biomechanics in Every Pocket

Free, 100% offline smartphone app converting any budget camera into a real-time biomechanics coach - no wearables, no lab, no internet.

User benefit: instant objective feedback, early fault detection, timestamped performance logs for scouts.

Flagship

Free 100% Offline
Cricket bowling-action analysis;
flags illegal elbow extension vs ICC 15°
local-language audio alert

On-device Tech: Core Engine

MediaPipe pose
lightweight ONNX angle model
on-device pose estimation
frame-by-frame

MVP Stage

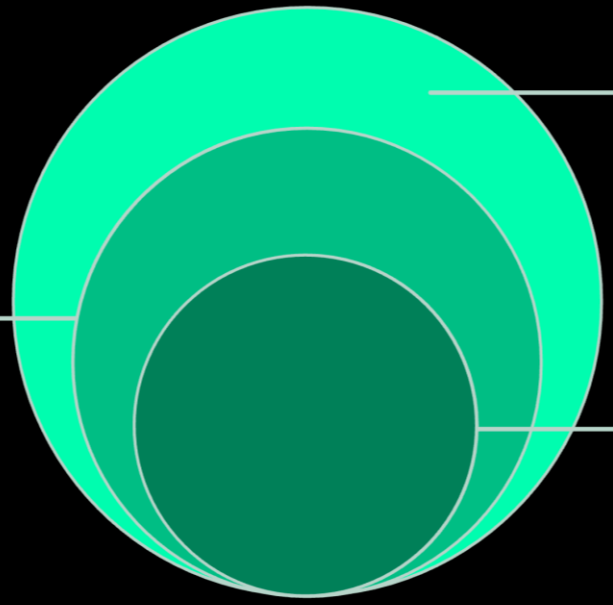

Working prototype (POC)
live demo follows
Add start-position analysis
Squat/landing risk modules

DrishtiSport AI

Customers

Who This Is For

Customer Segment

TAM
All grassroots youth participants to verify

SAM
Reachable schools and academies in target regions

SOM
Initial pilot accounts for trial schools

Current customer segment (target now)

Individual grassroots athletes and their local coaches/PE teachers in Tier 2/3 cities and rural India

Future customer segment (where this grows)

State-level and private sports academies and sports federations (as a paid B2B customer, via the scouting/analytics dashboard

Aspiring Athletes (10–22)

Tier 2/3 youth who lack access to professional coaching or lab feedback.

PE Teachers & Grassroots Coaches

Manage large groups with zero specialised equipment or biomechanics training.

Talent Scouts & Sports Bodies

Need objective, tamper-proof performance data vs subjective judgement.

DrishtiSport AI

Competition

Why DrishtiSport AI Wins on the Ground

Product	Cost	Hardware	Offline	Rule Accuracy
Elite motion capture labs	High	Extensive	No	High
Wearable sensor kits	Medium–High	Per-athlete	Partial	Variable
Generic fitness-form apps	Low	None	Yes	Low (vague)
DrishtiSport AI	**Free / Low**	**Phone only**	**Yes 100% offline**	**Rule-specific, tamper-proof**

Unique Value Proposition --- Why the moat holds:

- Zero extra hardware - scales to whole academies with one shared phone.
- Sport-specific, rule-grounded thresholds (e.g., ICC Law 24.3) - not vague scores.
- Tamper-proof verified performance logs target scouting bias and corruption.

The "Anti-Bias Verification" capability is unique - a clear differentiator judges can evaluate.

DrishtiSport AI

Impact

Beyond the App

Injury Prevention

Catch unsafe or illegal technique before it causes long-term joint damage or forced early

Equal Access

A rural academy with one phone gets the same technical feedback quality as a national training centre.

Coach Empowerment

PE teachers gain a diagnostic tool requiring zero biomechanics training to operate.

Policy Alignment

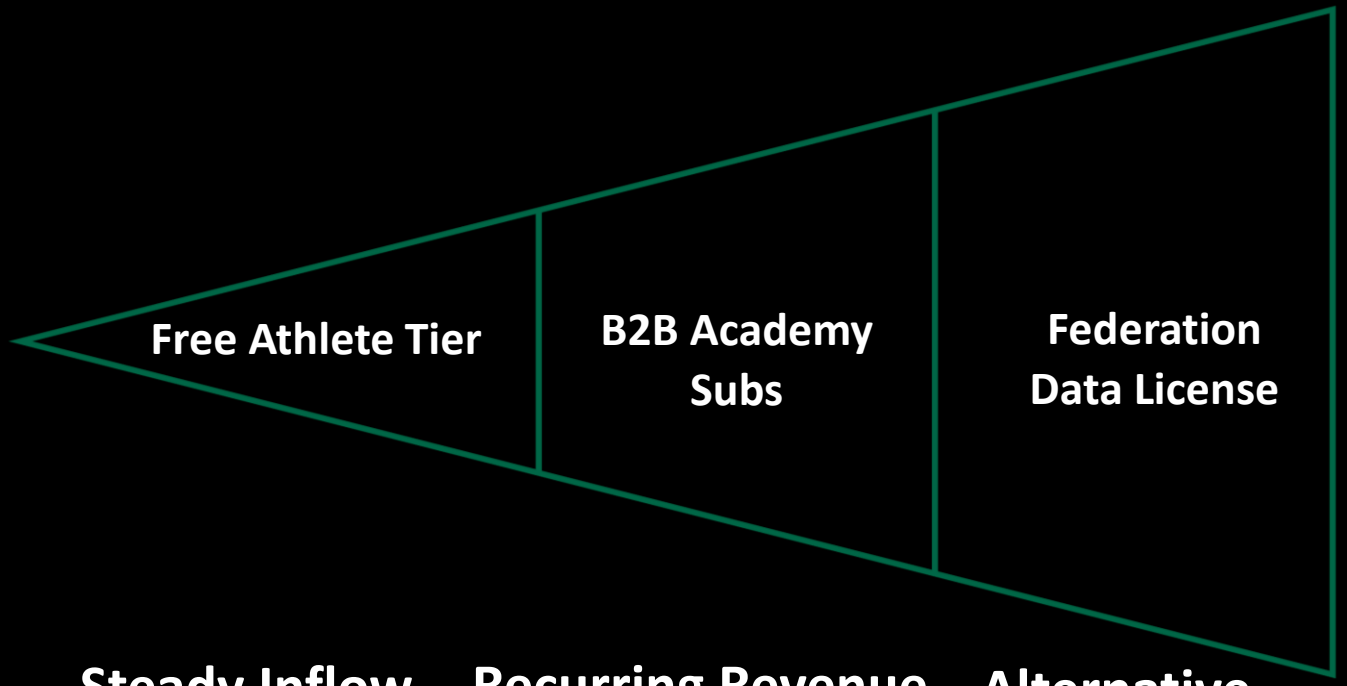

Supports Khelo India, Fit India and UN SDG 3 & SDG 10 - measurable social and national development impact.

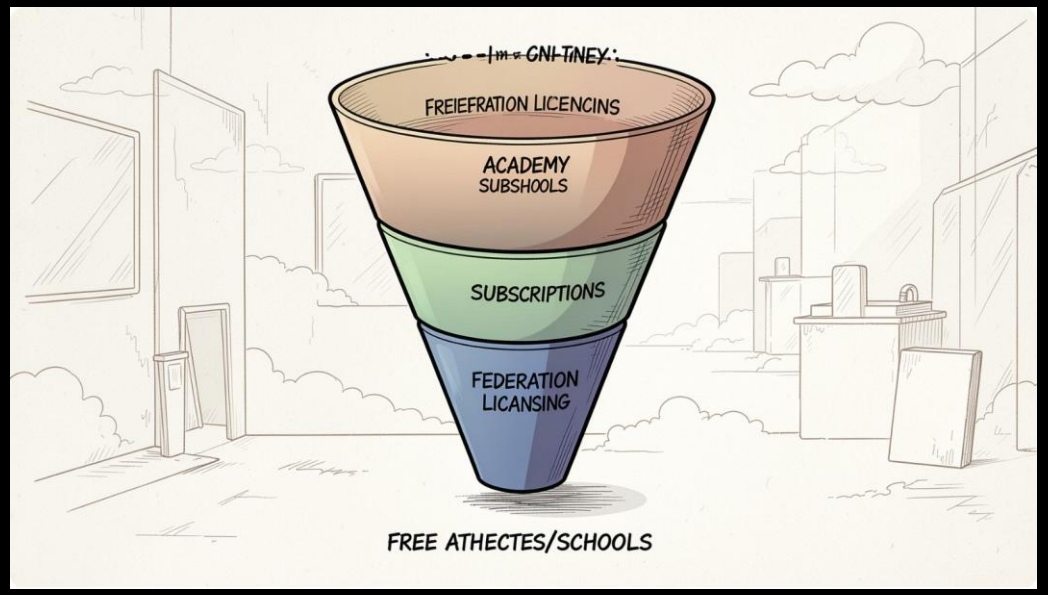

Impact cards above are focused measurable outcomes judges can map to program objectives and evaluation rubrics.

DrishtiSport AI

Revenue Model

How This Sustains Itself

Steady Inflow

Free Forever

Adoption engine:
athletes, schools, rural academies
Individuals

Recurring Revenue

B2B Subscriptions

Academies pay
multi-athlete tools
State and private sports academies

Alternative

Data Licensing

Anonymized analytics
Aggregated performance licensed to sports bodies
Government tie-ups

Revenue mix built for stability: recurring annual academy subscriptions for steady inflow; federation licensing for higher-value contracts.

No hidden cost to the athlete - monetization sits at institutional layer only.

DrishtiSport AI

Thank You

DrishtiSport AI - every rural playground deserves a coach.
This makes sure it gets one.
